

Maximum Ascending Subarray Sum 1

[Problem](#)[Submissions](#)[Leaderboard](#)

RATE THIS CHALLENGE

A subarray is ascending if every element is strictly greater than the previous element.

Return the maximum possible sum among all ascending subarrays. Complete the function `maxAscendingSum` that takes the following parameter: `int arr[n]`: an array of positive integers. Returns `int`: the maximum ascending subarray sum.

Input Format

The first line contains an integer `n`, the number of elements in the array. The second line contains `n` space-separated integers.

Constraints

$1 \leq n \leq 10^5$ $1 \leq arr[i] \leq 10^4$

Output Format

Print a single integer representing the maximum ascending subarray sum.

Sample Input 0

```
5
10 20 30 40 50
```

Sample Output 0

```
150
```

Language

C

```
3  #include <math.h>
4  #include <stdlib.h>
5
6  int main() {
7      int n;
8      scanf("%d", &n);
9      int nums[n];
10     for(int i=0;i<n;i++){
11         scanf("%d", &nums[i]);
12     }
13     int currentsum = nums[0];
14     int maxsum = nums[0];
15     for(int i=1;i<n;i++){
16         if(nums[i] > nums[i-1]){
17             currentsum += nums[i];
18         }
19         else{
20             currentsum = nums[i];
21         }
22         if(currentsum > maxsum){
```

```
23         maxsum = currentsum;
24     }
25 }
26 printf("%d", maxsum);
27 return 0;
28 }
29
30
```
